## Email extractor for mac

eMail Extractor for Mac is a reliable and powerful tool that effortlessly extracts email addresses from various text sources, including local files, clipboard contents, and more. This user-friendly application is perfect for building a customer email list using mailbox files. eMail Extractor supports an extensive range of file formats, including plain text (.txt), Adobe PDF (.pdf), MS Word (.doc/docx) documents, MS Excel (.xls/xlsx) sheets, HTML (.html/html/php), EML, MBOX, and RTF files. The software is designed to recover lost email contacts in mere seconds. It supports popular file formats and applications, such as Apple Mail, Outlook for Mac, Apple Pages, Word, PDF, and more. eMail Extractor stands out from the competition by being the only app that works seamlessly with both Apple Mail and Microsoft Outlook for Mac. This application is easy to use: simply drag and drop files and folders onto the program window, then click the "Extract Email Address" button. The software automatically removes duplicates, intelligently filters out false email addresses, and retrieves all valid email addresses. eMail Extractor's key features include: 1. Apple Mail and Outlook for Mac support 2. Extraction from plain-text files, PDFs, MS Word documents, and more 3. Fast and precise extraction process 4. Automatic duplicate removal and intelligent filtering of false email addresses Why choose eMail Extractor? The software offers a unique combination of features that set it apart from other competitors: 1. Comprehensive support for Apple Mail, Outlook for Mac, and multiple file formats 2. Low false positive rate, saving users time and effort 3. Lightning-fast extraction process that takes seconds to scan entire data sets Version 12.8, released on September 24, 2021, includes performance enhancements. However, some users have reported issues with large files not being handled efficiently. You'll be fine processing small files, but working with larger ones will lead to crashes, so it's best to split them into smaller batches first. The application has some annoying quirks, such as always defaulting to the documents folder and requiring you to manually change settings each time you launch it. This can get frustrating if you use the app frequently. I emailed the developer about the crashing issue a year ago, but they only responded with a brief "Thanks" without addressing my concerns or promising any fixes. Given this lack of support, especially considering the \$60 price tag, I feel ripped off and abandoned. However, if it weren't for these issues, I wouldn't have any regrets about my purchase. The app does offer some conveniences, like the ability to drag and drop files to process and converting email addresses to lowercase in the output file. It also works well with RTF files, even though it doesn't support Pages documents directly. Overall, the developer states that they don't collect any data from this app, but their privacy practices may vary depending on the features used or age. The eMail Extractor software can retrieve email addresses from various file formats like .txt, .pdf, .doc, .docx, .xls, .xlsx, .html, and .rtf. It's designed to be fast and easy-to-use, with a multi-threaded feature for efficient processing. For more similar applications on Mac, consider checking out System-i Email Extractor Lite, Email Extractor 2, or Extract Emails. Search engines like Google and Yahoo! can also be used to extract email addresses by searching for relevant keywords. To refine the results, use Google's search operators such as "email inurl:mortgage" or "email inurl:youtube.com". Additionally, the software allows users to specify a URL and scan it at various depths (levels 1-5) to retrieve email addresses from the website. The extracted data is stored in an output file without duplicates. The eMail Extractor also supports extracting email addresses from local files or folders on your computer. For macOS Mojave, follow these steps: Launch Mail application, open Finder, go to "Go" > "Go to Folder...", enter "~/Library/Mail/V(x)", and specify the path in Email Extractor software. For Outlook users, save emails and other data to a text file by clicking the "Save Emails" button. Select fields to save, click Next, and then choose an existing file or create a new one with .txt, .lst, or .csv extension. Lastly, register your copy of eMail Extractor by clicking the "Register" button on the main form, copying and pasting your registration key, and clicking OK.
