What's changed in this latest volume? This official study guide is thoroughly revised to help you master the concepts and topics on the CCNA 200-301 exam. It replaces an older book that was based on a previous exam blueprint. If you've already started studying with the prior edition, here are some key changes to look out for: Chapter 4 now includes a comparison of Cisco switch operating systems and introduces the WebUI interface for routers and switches. Chapter 6 explores differences in transport input configuration commands depending on device models and operating systems, and shows how to set up WebUI on a switch. Chapter 7 has been revised to include more information on Ethernet autonegotiation concepts and auto-MDIX. Chapter 8 now includes a large section on troubleshooting VLANs and VLAN trunks. Chapter 9 no longer covers EtherChannel load distribution but instead focuses on BPDU Guard, filter, loop guard, and root guard. Chapter 10 has been expanded to cover more about Layer 2 EtherChannels and verifies the mentioned concepts. Chapter 12 compares public IP networks and CIDR blocks. A new chapter on subnetting design issues has been added in Chapter 15, which was previously a PDF appendix. Chapters 16-19 have undergone significant changes, including discussing router interface autonegotiation and possible mistakes with the ip address interface subcommand. This study guide is fully updated to align with the new CCNA exam objectives and includes practice tests that mimic the actual exams' difficulty level. It's the revised edition of the #1 selling CCNA preparation self-study guide, packed with features to help candidates master more difficult testing methods on the actual exams.
